Contents

Preface xv

Acknowledgements xvii

Disclaimer xviii

List of Contributors xix

1. Related Designations **1-1**

Related Designations for Steels 1-2
Related Designations for Aluminium Alloys 1-10
Related Designations for Copper Alloys 1-12
Related Designations for Magnesium Alloys 1-14

2. Introductory Tables and Mathematical Information **2-1**

2.1 Conversion Factors 2-1
SI Units 2-1
Conversion Factors 2-4
Corrections to Temperature Values IPTS-48 to Implement IPTS-68 2-11
Corrosion Conversion Factors 2-12
Test Sieve Mesh Numbers Converted to Nominal Aperture Size from BS 410:1969 2-12
Temperature Scale Conversions 2-13
2.2 Mathematical Formulae and Statistical Principles 2-13
Algebra 2-13
Series and Progressions 2-17
Trigonometry 2-19
Mensuration 2-22

This page has been reformatted by Knovel to provide easier navigation.

Co-Ordinate Geometry 2-23
Calculus 2-25
Introduction to Statistics 2-28

3. General Physical and Chemical Constants 3-1

Atomic Weight and Atomic Numbers of the Elements 3-1
General Physical Constants 3-2
Moments of Inertia 3-3
Periodic Table 3-4
3.1 Radioactive Isotopes and Radiation Sources 3-5
Positron Emitters 3-5
Beta Energies and Half-Lives 3-6
Gamma Energies and Half-Lives 3-8
Nuclides for Alpha, Beta, Gamma and Neutron Sources 3-10

4. X-Ray Analysis of Metallic Materials 4-1

4.1 Introduction and Cross References 4-1
4.2 Excitation of X-Rays 4-1
X-Ray Wavelengths 4-2
4.3 X-Ray Techniques 4-11
X-Ray Diffraction 4-11
Specific Applications 4-14
Crystal Geometry 4-24
4.4 X-Ray Results 4-39
Metal Working 4-39
Crystal Structure 4-39
Atomic and Ionic Radii 4-44
4.5 X-Ray Fluorescence 4-49

5. Crystallography 5-1

5.1 The Structure of Crystals 5-1
Translation Groups 5-1
Symmetry Elements 5-2
The Point Group 5-2
The Space Group 5-3

This page has been reformatted by Knovel to provide easier navigation.

5.2 The Schoenflies System of Point- and Space-Group Notation 5-3
5.3 The Hermann-Mauguin System of Point- and Space-Group Notation 5-3
Notes on the Space-Group Tables 5-6

6. Crystal Chemistry 6-1
6.1 Structures of Metals, Metalloids and Their Compounds 6-1
Structural Details 6-30
Comparison of Strukturbericht and Pearson Nomenclature 6-54

7. Metallurgically Important Minerals 7-1
Minerals, Sources, and Uses 7-2

8. Thermochemical Data 8-1
8.1 Symbols 8-1
8.2 Changes of Phase 8-2
Elements 8-2
Intermetallic Compounds 8-3
Other Metallurgically Important Compounds 8-5
8.3 Heat, Entropy and Free Energy of Formation 8-8
Elements 8-8
Intermetallic Compounds 8-9
Selenides and Tellurides 8-12
Intermetallic Phases 8-14
8.4 Metallic Systems of Unlimited Mutual Solubility 8-15
Liquid Binary Metallic Systems 8-16
8.5 Metallurgically Important Compounds 8-20
Borides 8-21
Carbides 8-22
Nitrides 8-22
Silicides 8-23
Oxides 8-24
Sulphides 8-26

This page has been reformatted by Knovel to provide easier navigation.

Halides 8-28
Silicates and Carbonates 8-33
Compound (Double) Oxides 8-34
Phosphides 8-36
Phosphides Dissociation Pressures 8-36
Sulphides Dissociation Pressures 8-38
8.6 Molar Heat Capacities and Specific Heats 8-39
Elements 8-39
Alloy Phases and Intermetallic Compounds 8-41
Borides 8-43
Carbides 8-44
Nitrides 8-44
Silicides 8-45
Oxides 8-46
Sulphides, Selenides and Tellurides 8-48
Halides 8-49
8.7 Vapour Pressures 8-51
Elements 8-51
Halides and Oxides 8-53

9. Physical Properties of Molten Salts 9-1

Density of Pure Molten Salts 9-1
Densities of Molten Binary Salt Systems and Other Mixed Ionic Melts 9-7
Density of Some Solid Inorganic Compounds at Room Temperature 9-18
Electrical Conductivity of Pure Molten Salts 9-19
Electrical Conductivity of Molten Binary Salt Systems and Other Mixed Ionic Melts 9-28
Surface Tension of Pure Molten Salts 9-41
Surface Tension of Molten Binary Salt Systems and Other Mixed Ionic Melts 9-44
Viscosity of Pure Molten Salts 9-50
Viscosity of Molten Binary Salt Systems and Other Mixed Ionic Melts 9-52

This page has been reformatted by Knovel to provide easier navigation.

10. Metallography 10-1

10.1 Macroscopic Examination 10-2
Etching Reagents for Macroscopic Examination 10-2
10.2 Microscopic Examination 10-7
Plastics Used for Mounting 10-8
Attack Polishing Conditions for Various Metals and Alloys 10-14
Electrolytic Polishing Solutions for Various Metals and Alloys 10-16
Reagents for Chemical Polishing 10-20
Etching 10-21
Color Etching 10-25
Etching Reagents for Dislocations 10-27
10.3 Metallographic Methods for Specific Metals 10-29
Aluminium 10-29
Antimony and Bismuth 10-35
Beryllium 10-35
Cadmium 10-36
Chromium 10-37
Cobalt 10-37
Copper 10-37
Gold 10-42
Indium 10-44
Iron and Steel 10-45
Lead 10-51
Magnesium 10-53
Molybdenum 10-57
Nickel 10-57
Niobium 10-60
Platinum Group Metals 10-60
Silicon 10-60
Silver 10-62
Tantalum 10-63
Tin 10-63

This page has been reformatted by Knovel to provide easier navigation.

Titanium 10-64
Tungsten 10-66
Uranium 10-67
Zinc 10-68
Zirconium (and Hafnium) 10-70
Bearing Metals (Lead-Tin-Antimony), Low-Melting Point Solders, and Type Metals 10-71
Cemented Carbides and Other Hard Alloys 10-72
Powdered and Sintered Metals 10-73
10.4 Electron Metallography and Surface Analysis Techniques 10-74
Transmission Electron Microscopy 10-74
Scanning Electron Microscopy 10-80
Electron Spectroscopy and Surface Analytical Techniques 10-80
10.5 Quantitative Image Analysis 10-81
10.6 Scanning Acoustic Microscopy 10-82
10.7 Applications in Failure Analysis 10-83

11. Equilibrium Diagrams 11-1

11.1 Index of Binary Diagrams 11-1
11.2 Equilibrium Diagrams 11-7
Ag-Al *to* Au-Zr 11-7
B-C *to* Bi-Zr 11-97
C-Co *to* Cu-Zr 11-155
Dy-Er *to* K-Zn 11-271
La-Mg *to* Os-W 11-371
P-Pd *to* Zn-Zr 11-450
11.3 Acknowledgements 11-524
11.3.1 Binary systems 11-524
11.3.2 References to J. Less-Common Metals Marked (3) in 11.1 Index of Binary Diagrams 11-533
11.4 Ternary Systems and Higher Systems 11-533

12. Gas-Metal Systems 12-1

12.1 The Solution of Gases in Metals 12-1

This page has been reformatted by Knovel to provide easier navigation.

Dilute Solutions of Diatomic Gases 12-1
Complex Gas-Metal Systems 12-2
Solutions of Hydrogen 12-2
Solutions of Nitrogen 12-8
Solutions of Oxygen 12-8
Solutions of the Noble Gases 12-15
Theoretical and Practical Aspects of Gas-Metal Equilibria ... 12-15

13. Diffusion in Metals 13-1

13.1 Introduction 13-1
13.2 Methods of Measuring *D* 13-4
Steady-State Methods 13-4
Non-Steady-State Methods 13-5
Indirect Methods, Not Based on Fick's Laws 13-7
13.3 Mechanisms of Diffusion 13-8
Self-Diffusion in Solid Elements 13-10
Tracer Impurity Diffusion Coefficients 13-16
Diffusion in Homogeneous Alloys 13-43
Chemical Diffusion Coefficient Measurements 13-73
Self-Diffusion in Liquid Metals 13-119

14. General Physical Properties 14-1

14.1 The Physical Properties of Pure Metals 14-1
Physical Properties of Pure Metals at Normal Temperatures 14-1
Physical Properties of Pure Metals at Elevated Temperatures 14-3
14.2 The Thermophysical Properties of Liquid Metals 14-9
Density and Thermal Expansion Coefficient 14-9
Surface Tension 14-9
Viscosity 14-11
Heat Capacity 14-15
Electrical Resistivity 14-15
Thermal conductivity 14-15

This page has been reformatted by Knovel to provide easier navigation.

14.3 The Physical Properties of Aluminium and Aluminium Alloys 14-16
14.4 The Physical Properties of Copper and Copper Alloys 14-19
14.5 The Physical Properties of Magnesium and Magnesium Alloys 14-22
14.6 The Physical Properties of Nickel and Nickel Alloys 14-25
14.7 The Physical Properties of Titanium and Titanium Alloys 14-28
14.8 The Physical Properties of Zinc and Zinc Alloys 14-29
14.9 The Physical Properties of Zirconium Alloys 14-29
14.10 The Physical Properties of Pure Tin 14-29
14.11 The Physical Properties of Steels 14-30

15. Elastic Properties, Damping Capacity and Shape Memory Alloys 15-1

15.1 Elastic Properties 15-1
Elastic Constants of Polycrystalline Metals at Room Temperature 15-2
Elastic Compliances and Elastic Stiffnesses of Single Crystals 15-4
Principal Elastic Compliances and Elastic Stiffnesses at Room Temperature 15-5
Cubic Systems (3 Constants) 15-5
Hexagonal Systems (5 Constants) 15-6
Trigonal Systems (6 Constants) 15-7
Tetragonal Systems (6 Constants) 15-7
Orthorhombic Systems (9 Constants) 15-7
15.2 Damping Capacity 15-8
The Specific Damping Capacity of Commercial Alloys at Room Temperature 15-8
Anelastic Damping 15-10
15.3 Shape Memory Alloys 15-37
Mechanical Properties of Shape Memory Alloys 15-37
Compositions and Transformation Temperatures of Shape Memory Alloys 15-38
Physical and Mechanical Properties of a Titanium-55% Nickel Shape Memory Alloy 15-41

This page has been reformatted by Knovel to provide easier navigation.

16. Temperature Measurement and Thermoelectric Properties **16-1**

16.1 Temperature Measurement 16-1

The Defining Fixed Points of ITS-90 and Some Selected Secondary Reference Points 16-3

16.2 Thermocouple Reference Tables 16-4

16.3 Thermoelectric Materials 16-10

Introduction 16-10

Survey of Materials 16-10

Preparation Methods 16-12

17. Radiative Properties of Metals **17-1**

Spectral Normal Emittance of Metals 17-6

Spectral Emittance in the Infra-Red of Metals at High Temperatures 17-7

Spectral Emittance of Oxidised Metals 17-9

18. Electron Emission **18-1**

18.1 Thermionic Emission 18-1

Thermionic Properties of the Elements 18-2

Thermionic Properties of Refractory Metals with Adsorbed Electropositive Layers 18-2

Thermionic Properties of Refractory Metal Compounds 18-2

Emission at the Normal Maximum Operating Temperature of Practical Cathodes 18-3

18.2 Photoelectric Emission 18-4

Photoelectric Work Function 18-4

Properties of Efficient Photoelectric Emitting Surface 18-5

18.3 Secondary Emission 18-5

Maximum Secondary Emission Coefficients 18-6

18.4 Auger Emission 18-6

Secondary Emission from Oxidised Alloys and Photocell Surfaces 18-7

Secondary Emission from Insulating Metal Compounds 18-7

18.5 Electron Emission under Positive Ion Bombardment 18-8

This page has been reformatted by Knovel to provide easier navigation.

18.6 Field Emission 18-8
Second Townsend Coefficient γ Electrons Released Per Positive Arriving 18-9

19. Electrical Properties 19-1

19.1 Resistivity 19-1
Resistivity and Temperature Coefficient of Pure Metals 19-1
Resistivity of Some Specific Copper Alloys 19-7
Effect on the Resistivity of EC Aluminium of Some Additional Elements 19-7
19.2 Superconductivity 19-7
Transition Temperatures and Critical Fields for Superconducting Elements 19-8
Critical Temperatures of Superconducting Alloys and Compounds 19-8

20. Magnetic Materials and Their Properties 20-1

20.1 Magnetic Materials 20-1
20.2 Permanent Magnet Materials 20-2
Alnico Alloys 20-7
Ferrite 20-7
Rare Earth Cobalt Alloys 20-8
Neodymium Iron Boron 20-8
Bonded Materials 20-9
Other Materials 20-9
Properties, Names and Applications 20-9
20.3 Magnetically Soft Materials 20-9
Silicon-Iron Alloys 20-10
Ferrites and Garnets 20-12
Typical Properties of Silicon Steels 20-13
Typical Properties of Some Magnetically Soft Ferrites 20-14
Garnet Material 20-15
Nickel-Iron Alloys 20-15
Amorphous Alloy Material 20-16
20.4 High-Saturation and Constant-Permeability Alloys 20-16

This page has been reformatted by Knovel to provide easier navigation.

20.5 Magnetic Powder Core Materials 20-17
20.6 Magnetic Temperature-Compensating Materials 20-17
20.7 Non-Magnetic Steels and Cast Irons 20-18

21. Mechanical Testing 21-1

21.1 Hardness Testing 21-1
Brinell Hardness 21-1
Rockwell Hardness 21-2
Rockwell Superficial Hardness 21-3
Vickers Hardness Test 21-3
Micro-Indentation Hardness Testing 21-3
Hardness Conversion Tables 21-4
21.2 Tensile Testing 21-8
Standard Test Pieces 21-8
21.3 Impact Testing of Notched Bars 21-9
Izod Test 21-10
Charpy Test 21-10
21.4 Fracture Toughness Testing 21-12
Linear-Elastic (K_{Ic}) 21-12
K-R Curve 21-14
Elastic-Plastic (J_{Ic}, CTOD) 21-15
21.5 Fatigue Testing 21-16
Load-Controlled Smooth Specimen Tests 21-16
Strain-Controlled Smooth Specimen Tests 21-17
Fatigue Crack Growth Testing 21-17
21.6 Creep Testing 21-19
21.7 Non-Destructive Testing and Evaluation 21-20
Ultrasonic 21-21
Radiography 21-21
Electrical and Magnetic Methods 21-22
Acoustic Emission Testing 21-22
Thermal Wave Imaging 21-22

This page has been reformatted by Knovel to provide easier navigation.

22. Mechanical Properties of Metals and Alloys 22-1

22.1 Mechanical Properties of Aluminium and Aluminium Alloys 22-1
Alloy Designation System for Wrought Aluminium 22-1
Temper Designation System for Aluminium Alloys 22-2
22.2 Mechanical Properties of Copper and Copper Alloys 22-26
22.3 Mechanical Properties of Lead and Lead Alloys 22-46
22.4 Mechanical Properties of Magnesium and Magnesium Alloys 22-49
22.5 Mechanical Properties of Nickel and Nickel Alloys 22-61
Directionally Solidified and Single Crystal Cast Superalloys 22-80
22.6 Mechanical Properties of Titanium and Titanium Alloys 22-82
22.7 Mechanical Properties of Zinc and Zinc Alloys 22-93
22.8 Mechanical Properties of Zirconium and Zirconium Alloys 22-94
22.9 Tin and Its Alloys 22-95
22.10 Steels 22-98
22.11 Other Metals of Industrial Importance 22-157
22.12 Bearing Alloys 22-160

23. Sintered Materials 23-1

23.1 The PM Process 23-1
23.2 The Products 23-1
23.3 Manufacture and Properties of Powders 23-2
Powder Manufacture 23-2
Properties of Metal Powders and How They Are Measured 23-3
23.4 Properties of Powder Compacts 23-4
Comparison Tables of Standard Sieves 23-5
Properties of PM Grade Sponge Iron Powder 23-7
23.5 Sintering 23-8
23.6 Ferrous Components 23-8
23.7 Copper-Based Components 23-9
23.8 Aluminium Components 23-13

This page has been reformatted by Knovel to provide easier navigation.

23.9 Determination of the Mechanical Properties of Sintered Components 23-13
23.10 Heat Treatment and Hardenability of Sintered Steels 23-15
23.11 Case Hardening of Sintered Steels 23-15
23.12 Steam Treatment 23-15
23.13 Wrought PM Materials 23-15
Refractory Metals 23-24
Superalloys 23-25
Copper 23-25
Lead 23-25
Aluminium 23-27
Ferrous Alloys 23-27
Aluminium Matrix Composites 23-27
23.14 Spray Forming 23-28
23.15 Injection Moulding 23-29
23.16 Hardmetals and Related Hard Metals 23-31
ISO Classification of Carbides According to Use 23-34
23.17 Novel and Emerging PM Materials 23-36

24. Lubricants 24-1

24.1 Introduction 24-1
Main Regimes of Lubrication 24-1
24.2 Lubrication Condition, Friction and Wear 24-1
24.3 Characteristics of Lubricating Oils 24-2
Viscosity 24-2
Boundary Lubrication Properties 24-2
Chemical Stability 24-3
Physical Properties 24-3
24.4 Mineral Oils 24-3
24.5 Emulsions 24-6
24.6 Water-Based Lubricants 24-7
24.7 Synthetic Oils 24-7
Diesters 24-7
Neopentyl Polyol Esters 24-7
Triaryl Phosphate Esters 24-7

This page has been reformatted by Knovel to provide easier navigation.

Fluorocarbons 24-8
Polyglycols 24-8
24.8 Greases 24-8
Composition 24-8
Properties 24-10
24.9 Oil Additives 24-11
Machinery Lubricants 24-11
Cutting Oils 24-12
Lubricants for Chipless-Forming 24-13
Rolling Oils 24-13
24.10 Solid Lubricants 24-13

25. Friction and Wear 25-1

25.1 Friction 25-1
Friction of Unlubricated Surfaces 25-1
Friction of Unlubricated Materials 25-1
Friction of Lubricated Surfaces 25-9
Boundary Lubrication 25-9
Extreme Pressure (EP) Lubricants 25-9
25.2 Wear 25-12
Abrasive Wear 25-12
Adhesive Wear 25-13
Erosive Wear 25-14
Fretting Wear 25-15
Corrosive Wear 25-15

26. Casting Alloys and Foundry Data 26-1

26.1 Casting Techniques 26-1
26.2 Patterns – Crucibles – Fluxing 26-10
Pattern Materials 26-12
Crucibles and Melting Vessels 26-15
Iron and Steel Crucibles – Fluxing 26-15
26.3 Aluminium Casting Alloys 26-20
26.4 Copper Base Casting Alloys 26-39
26.5 Nickel-Base Casting Alloys 26-52

This page has been reformatted by Knovel to provide easier navigation.

26.6 Magnesium Alloys 26-56
26.7 Zinc Base Casting Alloys 26-68
26.8 Steel Castings 26-70
Casting Characteristics 26-70
Heat Treatment 26-70
26.9 Cast Irons 26-84
Classification of Cast Irons 26-84
General Purpose Cast Irons 26-84
Compacted Graphite Irons 26-94
Applications of Special Purpose Cast Irons 26-99
26.10 Acknowledgements 26-100

27. Engineering Ceramics and Refractory Materials 27-1

27.1 Physical and Mechanical Properties of Engineering Ceramics 27-1
27.2 Prepared But Unshaped Refractory Materials 27-7
27.3 Aluminous Cements 27-7
27.4 Castable Materials 27-8
27.5 Mouldable Materials 27-14
27.6 Ramming Material 27-14
27.7 Gunning Material 27-14
27.8 Design of Refractory Linings 27-14

28. Fuels 28-1

28.1 Coal 28-1
Analysis and Testing of Coal 28-1
Classification 28-5
Physical Properties of Coal 28-8
28.2 Metallurgical Cokes 28-8
Analysis and Testing of Coke 28-8
Properties of Metallurgical Coke 28-11
28.3 Gaseous Fuels, Liquid Fuels and Energy Requirements 28-13
Liquid Fuels 28-13
Gaseous Fuels 28-18
Energy Use Data for Various Metallurgical Processes 28-22

This page has been reformatted by Knovel to provide easier navigation.

29. Heat Treatment **29-1**

29.1 General Introduction and Cross References 29-1
29.2 Heat Treatment of Steel 29-1
Introduction 29-1
Transformations in Steels 29-1
Hardenability 29-12
Hardenability Measurement 29-17
Austenitisation 29-21
Annealing 29-23
Quenching 29-30
Tempering 29-33
Austempering 29-40
Martempering 29-41
Carburising 29-42
Carbonitriding 29-59
29.3 Heat Treatment of Aluminium Alloys 29-66
Introduction to Aluminium Heat Treating 29-66
A Brief Description of Aluminium Physical Metallurgy 29-67
Defects Associated With Heat Treatment 29-68
Solution Treatment 29-68
Quenching 29-71
Ageing (Natural and Artificial) 29-74
Appendix: Quenchants 29-75

30. Metal Cutting and Forming **30-1**

30.1 Introduction and Cross-References 30-1
30.2 Metal Cutting Operations 30-1
Turning 30-1
Boring 30-1
Drilling 30-2
Reaming 30-2
Milling 30-2
30.3 Abrasive Machining Processes 30-4
Surface Grinding 30-4

This page has been reformatted by Knovel to provide easier navigation.

Cylindrical Grinding 30-4
Centreless Grinding 30-4
Plunge Grinding 30-4
Creep Feed Grinding 30-4
Honing 30-5
Microsising 30-5
Belt Grinding 30-5
Disc Grinding 30-5
30.4 Deburring 30-5
30.5 Metal Forming Operations 30-5
Introduction 30-5
Massive Forming Operations 30-5
Sheet-Metal Forming Operations 30-7
Superplasticity 30-7
30.6 Machinability and Formability of Materials 30-8
Definitions 30-8
Formability 30-8
30.7 Coolants and Lubricants 30-9
Liquid Metal Working Fluids 30-9
Gaseous Fluids and Gaseous-Liquid Mixtures 30-10
30.8 Non-Traditional Machining Techniques 30-10
Electrical Discharge Machining (EDM) 30-10
Fast Hole EDM Drilling 30-10
Waterjet and Abrasive Waterjet Machining 30-10
Plasma Cutting 30-10
Photochemical Machining 30-11
Electrochemical Machining 30-11
Ultrasonic Machining 30-11
Lasers 30-11
30.9 Occupational Safety Issues 30-12
Machine Guarding 30-12
Hazardous Materials 30-12
Noise Exposure 30-12
Ergonomics 30-12

This page has been reformatted by Knovel to provide easier navigation.

31. Corrosion **31-1**

31.1 Introduction 31-1
31.2 Types of Corrosion 31-1
31.3 Uniform Corrosion 31-1
Galvanic Corrosion 31-2
Erosion, Cavitation, and Fretting Corrosion 31-3
31.4 Localized Forms of Corrosion 31-4
Crevice Corrosion 31-4
Dealloying Corrosion 31-5
Environmental Cracking – Stress Corrosion Cracking and Corrosion Fatigue Cracking 31-6
Hydrogen Damage 31-7
Intergranular Corrosion 31-8
Pitting Corrosion 31-9
31.5 Biocorrosion 31-10

32. Electroplating and Metal Finishing **32-1**

32.1 Polishing Compositions 32-1
32.2 Cleaning and Pickling Processes 32-2
32.3 Anodizing and Plating Processes 32-6
32.4 Electroplating Process 32-8
32.5 Plating Processes for Magnesium Alloys 32-16
32.6 Electroplating Process Parameters 32-17
32.7 Miscellaneous Coating Processes 32-18
32.8 Plating Formulae for Non-Conducting Surfaces 32-19
32.9 Methods of Stripping Electroplated Coatings 32-20
32.10 Conversion Coating Processes 32-21
32.11 Glossary of Trade Names for Coating Processes 32-23
Wet Processes 32-23
Dry Processes 32-25

33. Welding **33-1**

33.1 Introduction and Cross-Reference 33-1
33.2 Glossary of Welding Terms 33-1

This page has been reformatted by Knovel to provide easier navigation.

33.3 Resistance Welding 33-6
The Influence of Metallurgical Properties on Resistance Weldability 33-6
The Resistance Welding of Various Metals and Alloys 33-7
33.4 Solid-State Welding 33-10
Friction Welding 33-10
Ultrasonic Welding 33-13
Diffusion Welding 33-13
33.5 Fusion Welding 33-15
The Fusion Welding of Metals and Alloys – Ferrous Metals 33-15
Non-Ferrous Metals 33-29
Copper and Copper Alloys 33-31
Lead and Lead Alloys 33-35
Magnesium Alloys 33-35
Nickel and Nickel Alloys 33-36
Noble Metals 33-39
Refractory Metals 33-39
Zinc and Zinc Alloys 33-40
Dissimilar Metals 33-40
33.6 Major Standards Relating to Welding, Brazing and Soldering 33-41

34. Soldering and Brazing 34-1

34.1 Introduction and Cross-Reference 34-1
34.2 Quality Assurance 34-1
34.3 Soldering 34-2
General Considerations 34-2
Choice of Flux 34-2
Control of Corrosion 34-5
Solder Formulations 34-5
Cleaning 34-5
Product Assurance 34-9
34.4 Brazing 34-9
General Design Consideration 34-9

This page has been reformatted by Knovel to provide easier navigation.

Joint Design 34-9
Precleaning and Surface Preparation 34-11
Positioning of Filler Metal 34-11
Heating Methods 34-12
Brazeability of Materials and Braze Alloy Compositions 34-13
34.5 Diffusion Soldering or Brazing 34-13

35. Vapour Deposited Coatings and Thermal Spraying 35-1
35.1 Physical Vapour Deposition 35-1
Evaporation 35-1
Sputtering 35-1
Ion Cleaning 35-2
35.2 Chemical Vapour Deposition 35-2
35.3 Thermal Spraying 35-13
Combustion Wire Spraying 35-14
Combustion Powder Spraying 35-14
Electric Wire Arc Spraying 35-14
High Velocity Oxy-Fuel Spraying (HVOF) 35-14
Plasma Spraying 35-14

36. Superplasticity 36-1
Investigations on Superplasticity of Metal Alloys 36-2
Summary of Research on Internal Stress Superplasticity 36-12

37. Metal-Matrix Composites 37-1
Properties of Reinforcing Fibres at Room Temperature 37-2
Typical Interactions in Some Fibre-Matrix Systems 37-3
Properties of Aluminium Alloy Composites 37-4
Properties of Magnesium Alloy Composites 37-5
Properties of Titanium Alloy Composites 37-5
Properties of Zinc Alloy Composites 37-6
Properties of Co-Deformed Copper Composites 37-6

38. Non-Conventional and Emerging Metallic Materials 38-1
38.1 Introduction 38-1

This page has been reformatted by Knovel to provide easier navigation.

38.2 Cross References 38-1
38.3 Structural Intermetallic Compounds 38-1
Sources of Information on Structural Intermetallic Compounds 38-2
Focus of the Section 38-2
The Nature of Ordered Intermetallics 38-2
The Effect of Ordering on the Properties of Intermetallics ... 38-5
Overview of Aluminide Intermetallics 38-7
Nickel Aluminides 38-7
Titanium Aluminides 38-14
Dispersion Strengthened Intermetallics and Intermetallic Matrix Composites 38-16
Processing and Fabrication of Structural Intermetallics 38-16
Current and Potential Applications of Intermetallics 38-17
38.4 Metallic Foams 38-18
38.5 Metallic Glasses 38-20
Metallic Glasses Requiring Rapid Quenching 38-21
Bulk Metallic Glasses 38-22
38.6 Mechanical Behaviour of Micro and Nanoscale Materials 38-23
Mechanics of Scale 38-23
Thin Films 38-25
Nanomaterials 38-26
Nanostructures 38-28

39. Modeling and Simulation 39-1

39.1 Introduction 39-1
39.2 Electron Theory 39-1
39.3 Thermodynamics and Equilibrium Phase Diagrams 39-3
39.4 Thermodynamics of Irreversible Processes 39-4
39.5 Kinetics 39-5
39.6 Monte Carlo Simulations 39-6
39.7 Phase Field Method 39-7
39.8 Finite Difference Method 39-9
39.9 Finite Element Method 39-9
39.10 Empirical Modeling: Neural Networks 39-10

40. Supporting Technologies for the Processing of Metals and Alloys **40-1**

40.1 Introduction and Cross-References 40-1
40.2 Furnace Design 40-1
Introduction 40-1
Types of Furnaces 40-2
Heat Calculations 40-5
Refractory Design 40-6
Vacuum Furnaces 40-7
Cooling 40-8
40.3 Vacuum Technology 40-8
Introduction 40-8
Pressure Units and Vacuum Regions 40-9
Pressure Measurement 40-9
Pumping Technologies 40-12
Vacuum Systems 40-14
Residual Gas Analysis 40-15
Safety 40-16
Selective Bibliography 40-16
40.4 Metallurgical Process Control 40-16
Metals Production and Processing 40-16
Modeling and Control of Metallurgical Processes 40-17
Process Control Techniques 40-20
Instrumentation for Process Control 40-21
Process Control Examples in Metals Production 40-24
Keywords in Process Control 40-27

41. Bibliography of Some Sources of Metallurgical Information **41-1**

Index **I-1**
